articles

1 Analysis of lateral diffusion from a spherical cell surface to a tubular projection
David A. Berk, Alfred Clark, Jr., and Robert M. Hochmuth

9 Lateral mobility of integral proteins in red blood cell tethers
David A. Berk and Robert M. Hochmuth

19 Depolarization, intracellular calcium, and exocytosis in single vertebrate nerve endings
Manfred Lindau, Edward L. Stuenkel, Jean J. Nordmann

31 pH-induced conformational changes of the Fe^{2+}-N_ϵ(His F8) linkage in deoxyhemoglobin trout IV detected by the Raman active Fe^{2+}-N_ϵ(His F8) stretching mode
Michael Bosenbeck, Reinhard Schweitzer-Stenner, and Wolfgang Dreybrodt

42 Dynamics of phosphate head groups in biomembranes. Comprehensive analysis using phosphorus-31 nuclear magnetic resonance lineshape and relaxation time measurements
Erick J. Dufourc, Christian Mayer, Jürgen Stohrer, Gerhard Althoff, and Gerd Kothe

58 Calculated enhancement of open base pair probability downstream of a $(TATA)_2$ box
R. Beger and E. W. Prohofsky

63 Structures of the subgel phases of n-saturated diacyl phosphatidylcholine bilayers: FTIR spectroscopic studies of $^{13}C{=}O$ and ^{2}H labeled lipids
Ruthven N. A. H. Lewis and Ronald N. McElhaney

78 Novel voltage clamp to record small, fast currents from ion channels expressed in xenopus oocytes
M. Taglialatela, L. Toro, and E. Stefani

83 Electrostatic coupling of ion pumps
J. Nieto-Frausto, P. Läuger, and H.-J. Apell

96 Voltage-sensitive and solvent-sensitive processes in ion channel gating. Kinetic effects of hyperosmolar media on activation and deactivation of sodium channels
M. D. Rayner, J. G. Starkus, P. C. Ruben, and D. A. Alicata

109 Self similarity of protein surfaces
Thomas Goetze and Jürgen Brickmann

119 Lateral diffusion and aggregation. A Monte Carlo study
Michael J. Saxton

129 High resolution measurement of striation patterns and sarcomere motions in cardiac muscle cells
John W. Krueger and Adam Denton

145 Nature of motions between sarcomeres in asynchronously contracting cardiac muscle cells
John W. Krueger, Adam Denton, and Gerard Siciliano

161 Pulsatile signaling in intercellular communication. Periodic stimuli are more efficient than random or chaotic signals in a model based on receptor desensitization
Yue-Xian Li and Albert Goldbeter

172 Two-dimensional crystallization of a bacterial surface protein on lipid vesicles under controlled conditions
Andreas Paul, Harald Engelhardt, Uwe Jakubowski, and Wolfgang Baumeister

189 On the supramolecular organization of gramicidin channels. The elementary conducting unit is a dimer
Adam S. Cifu, Roger E. Koeppe II, and Olaf S. Andersen

204 Motion of cells sedimenting on a solid surface in a laminar shear flow
Olivier Tissot, Anne Pierres, Colette Foa, Michel Delaage, and Pierre Bongrand

216 Multichannel recordings from membranes which contain gap junctions
K. Manivannan, S. V. Ramanan, R. T. Mathias, and P. R. Brink

228 Uptake of basic amino acids and peptides into liposomes in response to transmembrane pH gradients
Ajoy C. Chakrabarti, Ian Clark-Lewis, P. Richard Harrigan, and Pieter R. Cullis

235 Determination of rate distributions from kinetic experiments
P. J. Steinbach, K. Chu, H. Frauenfelder, J. B. Johnson, D. C. Lamb, G. U. Nienhaus, T. B. Sauke, and R. D. Young

contents

246 Direct measurement of the intermolecular forces between counterion-condensed DNA double helices. Evidence for long range attractive hydration forces
Donald C. Rau and V. Adrian Parsegian

260 Direct measurement of temperature-dependent solvation forces between DNA double helices
Donald C. Rau and V. Adrian Parsegian

brief communications

272 High-pH form of bovine rhodopsin
Yiannis Koutalos

276 Hydration-dependent far-infrared absorption in lysozyme detected using synchrotron radiation
K. D. Moeller, G. P. Williams, S. Steinhauser, C. Hirschmugl, and J. C. Smith

letter to the editor

281 Two hypotheses reexamined: gating currents and the number of mobile ions in the Na^+ channel
Franklin F. Offner

february 1992
volume 61
number 2

287 Three-dimensional electron diffraction of plant light-harvesting complex
Da Neng Wang and Werner Kühlbrandt

298 Is the surface area of the red cell membrane skeleton locally conserved?
Thomas M. Fischer

306 Quantification of human neutrophil motility in three-dimensional collagen gels. Effect of collagen concentration
Maria R. Parkhurst and W. Mark Saltzman

316 Simulation of coherent energy transfer in an α-helical peptide by Fermi resonance
David L. Clarke and Michael A. Collins

334 Rotational dynamics of type I Fc_ϵ receptors on individually-selected rat mast cells studied by polarized fluorescence depletion
N. A. Rahman, I. Pecht, D. A. Roess, and B. G. Barisas

347 Shape changes of giant liposomes induced by an asymmetric transmembrane distribution of phospholipids
Emmanuel Farge and Philippe F. Devaux

358 Formation of ATP-insensitive weakly-binding crossbridges in single rabbit psoas fibers by treatment with phenylmaleimide or para-phenylenedimaleimide
Vincent A. Barnett, Alison Ehrlich, and Mark Schoenberg

368 Model of the Ca^{2+} oscillator for shuttle streaming in *Physarum polycephalum*
D. A. Smith and R. Saldana

381 More than two pyrrole tautomers of mesoporphyrin stabilized by a protein. High resolution optical spectroscopic study
Judit Fidy, Jane M. Vanderkooi, Juergen Zollfrank, and Josef Friedrich

392 Passive force generation and titin isoforms in mammalian skeletal muscle
Robert Horowits

399 Ca^{2+}-dependence of structural changes in troponin-C in demembranated fibers of rabbit psoas muscle
T. StC. Allen, L. D. Yates, and A. M. Gordon

410 Normal modes of symmetric protein assemblies. Application to the tobacco mosaic virus protein disk
Thomas Simonson and David Perahia

428 Structure of a fluid dioleoylphosphatidylcholine bilayer determined by joint refinement of x-ray and neutron diffraction data. II. Distribution and packing of terminal methyl groups
Michael C. Wiener and Stephen H. White

434 Structure of a fluid dioleoylphosphatidylcholine bilayer determined by joint refinement of x-ray and neutron diffraction data. III. Complete structure
Michael C. Wiener and Stephen H. White

448 Origin of the potassium and voltage dependence of the cardiac inwardly rectifying K-current (I_{K1})
Peter Pennefather, Carlos Oliva, and Nancy Mulrine

463 Steady-state kinetics of solitary bachtrachotoxin-treated sodium channels. Kinetics on a bounded continuum of polymer conformations
Kenneth A. Rubinson

480 Viscous cosolvent effect on the ultrasonic absorption of bovine serum albumin
Ada Almagor, Saul Yedgar, and Benjamin Gavish

487 Theory of fluorescence recovery after photobleaching measurements on cylindrical surfaces
David E. Wolf

494 Modeling ion permeation through batrachotoxin-modified Na^+ channels from rat skeletal muscle with a multi-ion pore
Arippa Ravindran, Hubert Kwiecinski, Osvaldo Alvarez, George Eisenman, and Edward Moczydlowski

509 Two-dimensional model of calcium waves reproduces the patterns observed in *Xenopus* oocytes
Steven Girard, Andreas Lückhoff, James Lechleiter, James Sneyd, and David Clapham

518 Autocrine ligand binding to cell receptors. Mathematical analysis of competition by solution "decoys"
Kimberly E. Forsten and Douglas A. Lauffenburger

530 Adenosine 5′-triphosphate consumption by smooth muscle as predicted by the coupled four-state crossbridge model
Chi-Ming Hai and Richard A. Murphy

542 Evanescent interference patterns for fluorescence microscopy
James R. Abney, Bethe A. Scalettar, and Nancy L. Thompson

553 Structural dynamics and oligomeric interactions of Na^+,K^+-ATPase as monitored using fluorescence energy transfer
Evzen Amler, Alan Abbott, and William James Ball, Jr.

569 Forces of a single-beam gradient laser trap on a dielectric sphere in the ray optics regime
A. Ashkin

brief communication

583 Noise analysis and single-channel observations of 4 pS chloride channels in human airway epithelia
M. Duszyk, A. S. French, and S. F. P. Man

letters to the editor

588 Arguments in favor of an aggregational model of the gramicidin channel: a reply
Gunther Stark

590 Dimer versus tetramer
Olaf S. Andersen and Roger E. Koeppe II

march 1992
volume 61
number 3

593 Calorimetric studies on the influence of *N*-methylated headgroups on the mixing behavior of diheptadecanoyl phosphatidylcholine with 1-behenoyl-2-lauroylphosphatidylcholine
Robert B. Sisk and Ching-hsien Huang

604 Monovalent cation binding to cubic insulin crystals
Olga Gursky, Youli Li, John Badger, and Donald L. D. Caspar

612 Bioelectrorheological model of the cell. 3. Viscoelastic shear deformation of the membrane
Jaroslaw Poznanski, Piotr Pawlowski, and Magdalena Fikus

621 Microviscosity of human erythrocytes studied using hypophosphite two-spin order relaxation
William S. Price, Baw-Ching Perng, Ching-Lung Tsai, and Lian-Pin Hwang

631 The efficiency of malachite green, free and protein bound, as a photon-to-heat converter
Guilherme L. Indig, Daniel G. Jay, and Joseph J. Grabowski

639 Ion effects on gating of the Ca^{2+}-activated K^+ channel correlate with occupancy of the pore
Susan D. Demo and Gary Yellen

649 Two roles for Ca^{2+} in agonist stimulated Ca^{2+} oscillations
Joel Keizer and Gary W. De Young

661 Epitope mapping by photobleaching fluorescence resonance energy transfer measurements using a laser scanning microscope system
Gàbor Szabò, Jr., P. Scott Pine, James L. Weaver, Mark Kasari, and Adorjan Aszalos

671 Time course of transmitter release calculated from simulations of a calcium diffusion model
Walter M. Yamada and Robert S. Zucker

683 Time-resolved x-ray diffraction and calorimetric studies at low scan rates. II. On the fine structure of the phase transitions in hydrated dipalmitoylphosphatidylethanolamine
Haruhiko Yao, Ichiro Hatta, Rumiana Koynova, and Boris Tenchov

694 Dynamics of energy transfer and trapping in the light-harvesting antenna of *Rhodopseudomonas viridis*
Fu Geng Zhang, Tomas Gillbro, Rienk van Grondelle, and Villy Sundström

704 Significance of glomerular compartimentalization for olfactory coding
Detlev Schild and Helmut Riedel

716 Spectral hole burning study of protoporphyrin IX substituted myoglobin
J. Zollfrank, J. Friedrich, and F. Parak

725 Structural polymorphism correlated to surface charge in filamentous bacteriophages
S. Bhattacharjee, M. J. Glucksman, and Lee Makowski

736 Multiple conductances in the large K^+ channel from *Chara corallina* shown by a transient analysis method
S. D. Tyerman, B. R. Terry, and G. P. Findlay

750 A new mode for heme-heme interactions in hemoglobin. Associated with distal perturbations
Abraham Levy, Vijay S. Sharma, Lu Zhang, and Joseph M. Rifkind

756 Cable analysis with the whole-cell patch clamp. Theory and experiment
Meyer B. Jackson

767 Comparison of the lipid acyl chain dynamics between small and large unilamellar vesicles
Leslie S. Lepore, Jeffrey F. Ellena, and David S. Cafiso

776 Intermolecular protein interactions in solutions of calf lens α-crystallin. Results from $1/T_1$ nuclear magnetic relaxation dispersion profiles
S. H. Koenig, R. D. Brown III, M. Spiller, B. Chakrabarti, and A. Pande

786 Modulation of the interbilayer hydration pressure by the addition of dipoles at the hydrocarbon/water interface
Sidney A. Simon, Thomas J. McIntosh, Alan D. Magid, and David Needham

800 Events leading to the opening and closing of the exocytotic fusion pore have markedly different temperature dependencies. Kinetic analysis of single fusion events in patch-clamped mouse mast cells
Andres F. Oberhauser, Jonathan R. Monck, and Julio M. Fernandez

brief communications

810 Determination of electric field threshold for electrofusion of erythrocyte ghosts. Comparison of pulse-first and contact-first protocols
Yankuan Wu, Joseph G. Montes, and Raymond A. Sjodin

816 Flexibility in crystalline insulins
John Badger

820 A residue substitution near the β-ionone ring of the retinal affects the M substates of bacteriorhodopsin
György Váró, László Zimányi, Man Chang, Baofu Ni, Richard Needleman, and Janos K. Lanyi

827 Constant helical pitch of the gramicidin channel in phospholipid bilayers
John Katsaras, R. Scott Prosser, Robert H. Stinson, and James H. Davis

letter to the editor

831 Models for gramicidin channels
Roger E. Koeppe II, M. Jeff Taylor, and Olaf S. Andersen

correction

835 Faber and Korn

april 1992
volume 61
number 4

839 Nature and localization of avian lens glycogen by electron microscopy and Raman spectroscopy
Carolina G. Castillo, Woo-Kuen Lo, John F. R. Kuck, and Nai-Teng Yu

845 Calibration of a resonance energy transfer imaging system
Michael Ludwig, Nancy F. Hensel, and Robert J. Hartzman

858 Analysis of the three-α-helix motif in the spectrin superfamily of proteins
David A. D. Parry, Tony W. Dixon, and Carolyn Cohen

868 Energy transfer and trapping in the photosystem I core antenna. A temperature study
Melanie Werst, Yiwei Jia, Laurens Mets, and Graham R. Fleming

879 Saturation transfer, continuous wave saturation, and saturation recovery electron spin resonance studies of chain-spin labeled phosphatidylcholines in the low temperature phases of dipalmitoyl phosphatidylcholine bilayers. Effects of rotational dynamics and spin—spin interactions
Piotr Fajer, Anthony Watts, and Derek Marsh

892 Pyrene-labeled cardiac troponin C. Effect of Ca^{2+} on monomer and excimer fluorescence in solution and in myofibrils
Ying-Ming Liou and Franklin Fuchs

902 Sterically stabilized liposomes. Reduction in electrophoretic mobility but not electrostatic surface potential
M. C. Woodle, L. R. Collins, E. Sponsler, N. Kossovsky, D. Papahadjopoulos, and F. J. Martin

911 Pathways of energy flow through the light-harvesting antenna of the photosynthetic purple bacterium rhodobacter sphaeroides
Fu Geng Zhang, Rienk van Grondelle, and Villy Sundström

921 Theoretical analysis of Lumbry-Eyring models in differential scanning calorimetry
Jose M. Sanchez-Ruiz

936 Cryo-EM of the native structure of the calcium release channel/ryanodine receptor from sarcoplasmic reticulum
M. Radermacher, T. Wagenknecht, R. Grassucci, J. Frank, M. Inui, C. Chadwick, and S. Fleischer

941 Steady-state availability of sodium channels. Interactions between activation and slow inactivation
Peter C. Ruben, John G. Starkus, and Martin D. Rayner

956 Spatial specificity of chromophore assisted laser inactivation of protein function
Kenneth G. Linden, Joseph C. Liao, and Daniel G. Jay

963 Role of lamellar membrane structure in tether formation from bilayer vesicles
Bojan Božič, Saša Svetina, Boštjan Žekš, and Richard E. Waugh

974 Local and nonlocal curvature elasticity in bilayer membranes by tether formation from lecithin vesicles
Richard E. Waugh, Jianben Song, Saša Svetina, and Boštjan Žekš

983 Incorporation of the nicotinic acetylcholine receptor into planar multilamellar films: characterization by fluorescence and Fourier transform infrared difference spectroscopy
John E. Baenziger, Keith W. Miller, and Kenneth J. Rothschild

993 Linear dichroism of acrylodan-labeled tropomyosin and myosin subfragment 1 bound to actin in myofibrils
Danuta Szczęsna and Sherwin S. Lehrer

1001 Temperature and pH sensitivity of the O_{640} intermediate of the bacteriorhodopsin photocycle
I. Chizhov, M. Engelhard, D. S. Chernavskii, B. Zubov, and B. Hess

1007 Resonance Raman investigation of the effects of copper binding to iron-mesoporphyrin·histidine-rich glycoprotein complexes
Randy W. Larsen, David J. Nunez, William T. Morgan, Barry B. Muhoberac, and Mark R. Ondrias

brief communications

1018 Macroscopic orientation effects in broadline NMR-spectra of model membranes at high magnetic field strength. A method preventing such effects
T. Brumm, A. Möps, C. Dolainsky, S. Brückner, and T. M. Bayerl

1025 Changes of the physical properties of the liquid-ordered phase with temperature in binary mixtures of DPPC with cholesterol. A ^{2}H-NMR, FT-IR, DSC, and neutron scattering study
Herbert Reinl, Thomas Brumm, and Thomas M. Bayerl

1036 Analysis of the bilayer phase transition temperatures of phosphatidylcholines with mixed chains
Derek Marsh

1041 Low pH myoglobin photoproducts
J. Timothy Sage, Dimitrios Morikis, Pusheng Li, and Paul M. Champion

1045 Resonance transduction of low level periodic signals by an enzyme: an oscillatory activation barrier model
Vladislav S. Markin, Daosheng Liu, Murray D. Rosenberg, and Tian Y. Tsong

correction

1057 Smith and Saldana

clarification

1059 Mao

may 1992
volume 61
number 5

1061 Sodium-23 and potassium-39 nuclear magnetic resonance relaxation in eye lens. Examples of quadrupole ion magnetic relaxation in a crowded protein environment
Arthur Stevens, Peter Paschalis, and Thomas Schleich

1076 Theoretical study of the multiline EPR signal from the S_2 state of the oxygen evolving complex of photosystem II. Evidence for a magnetic tetramer
Jacques Bonvoisin, Geneviève Blondin, Jean-Jacques Girerd, and Jean-Luc Zimmermann

1087 Regulation of tension development by MgADP and Pi without Ca^{2+}. Role in spontaneous tension oscillation of skeletal muscle
Hideharu Shimizu, Takashi Fujita, and Shin'ichi Ishiwata

1099 Spontaneous oscillation of tension and sarcomere length in skeletal myofibrils. Microscopic measurement and analysis
Takashi Anazawa, Kenji Yasuda, and Shin'ichi Ishiwata

1109 Charge movement and SR calcium release in frog skeletal muscle can be related by a Hodgkin-Huxley model with four gating particles
Bruce J. Simon and David A. Hill

1117 Electrostatics of membrane adhesion
S. Marčelja

1122 Large tetraalkyl ammonium cations produce a reduced conductance state in the sheep cardiac sarcoplasmic reticulum Ca^{2+}-release channel
Andrew Tinker, Allan R. G. Lindsay, and Alan J. Williams

1133 A reconstruction of charge movement during the action potential in frog skeletal muscle
Christopher L.-H. Huang, and Lee D. Peachey

1147 Global target analysis of picosecond chlorophyll fluorescence kinetics from pea chloroplasts. A new approach to the characterization of the primary processes in photosystem II α- and β-units
Theo A. Roelofs, Choon-Hwan Lee, and Alfred R. Holzwarth

1164 Electrophysiological interaction through the interstitial space between adjacent unmyelinated parallel fibers
Roger C. Barr and Robert Plonsey

1176 Combined influence of cholesterol and synthetic amphiphillic peptides upon bilayer thickness in model membranes
Frank A. Nezil and Myer Bloom

1184 Fast release of $^{45}Ca^{2+}$ induced by inositol 1,4,5-trisphosphate and Ca^{2+} in the sarcoplasmic reticulum of rabbit skeletal muscle: evidence for two types of Ca^{2+} release channels
Carmen Valdivia, Donna Vaughan, Barry V. L. Potter, and Roberto Coronado

1194 Kinetics of the fast electric signal from oriented purple membrane
Andrei K. Dioumaev, Dimitrii S. Chernavskii, Pál Ormos, György Váró, and Lajos Keszthelyi

1201 Nature of the individual Ca^{2+} binding sites in Ca^{2+}-regenerated bacteriorhodopsin
Y. N. Zhang, L. L. Sweetman, E. S. Awad, and M. A. El-Sayed

1207 In vivo study of chloroplast volume regulation
Douglas C. McCain and John L. Markley

1213 Membrane dipole potentials, hydration forces, and the ordering of water at membrane surfaces
Klaus Gawrisch, Delaney Ruston, Joshua Zimmerberg, V. Adrian Parsegian, R. Peter Rand, and Nola Fuller

1224 Bilayer structure and physical dynamics of the cytochrome b_5 dimyristoylphosphatidylcholine interaction
David W. Chester, V. Skita, H. S. Young, T. Mavromoustakos, and P. Strittmatter

1244 Molecular basis for the inhibition of 1,4-dihydropyridine calcium channel drugs binding to their receptors by a nonspecific site interaction mechanism
Howard S. Young, Victor Skita, R. Preston Mason, and Leo G. Herbette

1256 Diffuse x-ray scattering from tropomyosin crystals
Susan Chacko and George N. Phillips, Jr.

1267 Velocity of movement of actin filaments in in vitro motility assay. Measured by fluorescence correlation spectroscopy
J. Borejdo and S. Burlacu

1281 Effects of tryptophan mutation on the deprotonation and reprotonation kinetics of the Schiff base during the photocycle of bacteriorhodopsin
Shuguang Wu, Yuejin Chang, M. A. El-Sayed, Thomas Marti, Tatsushi Mogi, and H. Gobind Khorana

1289 Calorimetric and x-ray diffraction studies of rye glucocerebroside mesomorphism
Daniel V. Lynch, Martin Caffrey, Jacqueline L. Hogan, and Peter L. Steponkus

1301 Regulation of water flow by actin-binding protein-induced actin gelation
Tadanao Ito, Atsushi Suzuki, and Thomas P. Stossel

1306 Influence of ion occupancy and membrane deformation on gramicidin A channel stability in lipid membranes
Avi Ring

1316 Dynamic ion–ion and water–ion interactions in ion channels
Jin V. Wu

1332 Gating kinetics of Batrachotoxin-modified Na^+ channels in the squid giant axon. Voltage and temperature effects
Ana M. Correa, Francisco Bezanilla, and Ramón Latorre

1353 Lipid surface charge does not influence conductance or calcium block of single sodium channels in planar bilayers
Jennings F. Worley III, Robert J. French, Bernard A. Pailthorpe, and Bruce K. Krueger

1364 Temperature dependence of the disulfide perturbation to the triplet state of tryptophan
Zhi Li, Allan Bruce, and William C. Galley

1372 Constant fields and constant gradients in open ionic channels
Duan Pin Chen, Victor Barcilon, and Robert S. Eisenberg

1394 Effect of temperature and pressure on the protonation of glycine
R. M. Izatt, J. L. Oscarson, S. E. Gillespie, H. Grimsrud, J. A. R. Renuncio, and C. Pando

1402 Effects of protein concentration on IgE receptor mobility in rat basophilic leukemia cell plasma membranes
James L. Thomas, Toni J. Feder, and Watt W. Webb

1413 Temperature-reversible eruptions of vesicles in model membranes studied by NMR
Frank A. Nezil, Sybille Bayerl, and Myer Bloom

brief communications

1427 Frequency domain impedance measurements of erythrocytes. Constant phase angle impedance characteristics and a phase transition
Jian-Zhong Bao, Christopher C. Davis, and Robert E. Schmukler

1435 Protein structures in SDS micelle-protein complexes
Parker and Song

june 1992
volume 61
number 6

1443 Determination of electrostatic potentials at biological interfaces using electron–electron double resonance
Yeon-Kyun Shin and Wayne L. Hubbell

1454 United States—Australia workshop on membrane biophysics
Reported by D. W. Deamer and Bruce Cornell

1462 Enhancement of carotenoid-to-chlorophyll singlet energy transfer by carotenoid–carotenoid interaction
Jesús Zurdo, Concepción Fernández-Cabrera, and Juan M. Ramírez

1470 Cytoplasmic hydrogen ion diffusion coefficient
Nabil F. Al-Baldawi and R. F. Abercrombie

1480 Effects of magnesium pyrophosphate on mechanical properties of skinned smooth muscle from the guinea pig *Taenia coli*
Håkan Arheden and Anders Arner

1495 The invertebrate myosin filament: subfilament arrangement of the solid filaments of insect flight muscles
Gernot Beinbrech, Francis T. Ashton, and Frank A. Pepe

1513 The myosin filament XIV backbone structure
Francis T. Ashton, John Weisel, and Frank A. Pepe

1529 Photobehavior of *Halobacterium halobium:* sinusoidal stimulation and a suppression effect of responses to flashes
Sabina Lucia, Cesare Ascoli, and Donatella Petracchi

1540 Replication of viruses in a growing plaque: reaction-diffusion model
John Yin and J. S. McCaskill

1550 Solid-state ^{13}C NMR spectroscopy of a ^{13}C carbonyl-labeled polypeptide
C. Wang, Q. Teng, and T. A. Cross

1557 Kinetics and mechanism of cell membrane electrofusion
Iziaslav G. Abidor and Arthur E. Sowers

1570 Potentiostatic deposition of DNA for scanning probe microscopy
S. M. Lindsay, N. J. Tao, J. A. DeRose, P. I. Oden, Yu. L. Lybuchenko, R. E. Harrington, and L. Shlyakhtenko

1585 Spatial and temporal electroselection patterns in electric field stimulation of polarized luminescence from photosynthetic membrane vesicles
Yosef Rosemberg, Philip Rozen, Shmuel Malkin, and Rafi Korenstein

1595 Distance measurements using paramagnetic ion-induced relaxation in the saturation transfer electron spin resonance of spin-labeled biomolecules. Application to phospholipid bilayers and interdigitated gel phases
Tibor Páli, Rosa Bartucci, László I. Horváth, and Derek Marsh

1603 Phospholipid interactions in model membrane systems. I. Experiments on monolayers
James Mingins, Dirk Stigter, and Ken A. Dill

1616 Phospholipid interactions in model membrane systems. II. Theory
Dirk Stigter, James Mingins, and Ken A. Dill

1630 Nanosecond photolytic interruption of bacteriorhodopsin photocycle. K-590 → BR-570 reaction
V. Bazhenov, P. Schmidt, and G. H. Atkinson

1638 Computer models of a new deoxy-sickle cell hemoglobin fiber based on x-ray diffraction data
Xiang-Qi Mu and Beatrice Magdoff Fairchild

1647 Consideration of dipole orientation angles yields accurate rate equations for energy transfer in the rapid diffusion limit
Joseph V. Mersol, Hailin Wang, Ari Gafni, and Duncan G. Steel

1656 Analytical sedimentation studies of turkey gizzard myosin light chain kinase and telokin
Juan Ausio, Dean A. Malencik, and Sonia R. Anderson

brief communication

1664 A sensitive measure of surface stress in the resting neutrophil
David Needham and Robert M. Hochmuth
